

Cheat Sheet – Gravity Pipes

1. Edit the feature settings for the pipe network. Under the settings tab, right-click on “Pipe Network” and then select “Edit Feature Settings”.

Edit Feature Settings - Pipe Network

Dimension Anchor Elevation Value for Structures	0.00'			
Dimension Anchor Plot Height Value for Structures	0.0000"			
Structure Label Placement	At Bottom of Structure			
Pipe Section Label Placement	At Bottom of Pipe			

2. Right-click the part list you wish to use and select the edit button. Add the appropriate families and part sizes to use the available parts for the pipe network.

- Right-click an example rule set, and then select edit. For both pipes and structures. See the manual for a detailed explanation of each rule.

Add and delete the desired rules and change the order to determine how they react.

Note:

Always add the “Set Sump Depth” rule whether you have a sump or not for the project. If this rule is not present, the program will add a 2’ sump by default.

The next step is to either draw the pipe run or convert a polyline to a pipe network. You should make a note to realize that structures and pipes can only be connected if they are in the same pipe network. Therefore, you can start with one polyline, but then you need to edit the network to add more objects to the pipe network. Also note that you can merge networks later if you want different pipe networks to join.

a. “Home” ribbon tab > Pipe Network > Create Pipe Network from Object

- b. When editing a pipe network or creating a pipe network by **“Home” ribbon tab > Pipe Network > Create Pipe Network from Object**

4. **“Modify” ribbon tab > Pipe Network > Network Tools > Draw Parts in Profile**

Either select the entire pipe network or select the parts you wish to show in the profile view. You can also click on a part, then right-click and choose add part to profile view. This is also available in the right-click menu after selecting part(s). Alternatively, use the Pipe Network tab of the Profile View Properties to turn pipe on and off.

5. **“Pipe Network” ribbon tab > Add Labels ... or “Home” tab > Add Labels**

Choose either “Entire Network Plan”, “Entire Network Profile”, “Single Part Plan”, or “Single Part Profile”. You may also click on a part, then right-click and choose add label.

Different Methods of Editing a Pipe Network

1. Using Grips

- a. Plan View – Hot gripping structures will pull all objects that are connected to it.

- b. Profile View – You can hot grip the invert, centerline, or crown of a pipe. You can also multi-hot-grip grips by holding down shift while selecting the grip.

2. Using the part properties – one part at a time.

Click on a structure, right-click, and then choose “Structure Properties”.

Structure Properties	Value
General	
Surface Elevation At Insertion Point	
Reference Surface	Existing Ground
Reference Alignment	Main Street
Geometry	
Structure Rotation Angle	0.0000 (d)
Structure Offset	29.75'
Structure Station	0+ 17.91'
Structure Northing	176093.8110'
Structure Easting	1658050.9584'
Connected Pipes	1
Hydraulic Properties	
Hydraulic Grade Line	0.00'
Energy Grade Line	0.00'
Known Capacity	0.000
Known Flow	0.000 cubic feet per second
Insertion Rim Behavior	
Insertion Rim Elevation	1.42'
Surface Adjustment Value	0.00'
Automatic Surface Adjustment	True
Sump Behavior	
Sump Elevation	-0.88'
Sump Depth	0.00'
Control Sump By:	Depth
Part Data	
Part Type	Junction Structure
Part Subtype	Concentric
Part Description	Concentric Cylindrical Structure
Part Size Name	Concentric Structure 48 dia 18 frame 24 cone 5 wall 6 floor
Structure Type	Manhole
Benching Method	Depressed or Sump
Structure Shape	Cylinder
Vertical Pipe Clearance	34.000"
Rim to Sump Height	2.30'
Wall Thickness	5.000"
Floor Thickness	6.000"
Material	Reinforced Concrete
Frame	Standard
Grate	Standard
Cover	Standard
Frame Height	4.000"
Frame Diameter	18.000"

4. Other Tips and Ticks

- To change a manhole or pipe to different part, simply select the part, right-click and select **Swap Part**.
- To change a pipe network globally you can change the pipe or structure rules and then use the command "**Pipe Network**" ribbon tab > **Apply Rules** to set the rules to the desired parts.
- Renaming and renumbering pipes and structures can be accomplished by running the command "**Pipe Network**" ribbon tab > **Rename Parts**.
- Use the **Project Explorer** to make batch changes to the pipe network. For example, multiple "Swap Part" and change slopes for multiple pipes.

<https://thecadmasters.com/project-explorer-for-civil-3d/>

- With multiple pipes going in and out of a structure, you match the elevation of one of the pipes. In structure properties, go to the Connected Pipes tab, highlight all the pipes you wish to modify and then right-click and choose the desired option. Highlight the desired pipe to match and choose the drop amount.
