

Cheat Sheet – Pressure Pipes

1. Edit the feature settings for the pressure network. Under the settings tab, right-click on “Pressure Network” and then select “Edit Feature Settings”.

Edit Feature Settings - Pressure Pipe Networks

2. Right-click the part list you wish to use and select the edit button.

Pressure Network Parts List - CMI-DIP

Name	Style	Render Material	Pay Item
CMI-DIP			
ductile iron			
4" DIP	CMI Water	Iron - Cast	4" DIP
6" DIP	CMI Water	Iron - Cast	6" DIP
8" DIP	CMI Water	Iron - Cast	8" DIP
10" DIP	CMI Water	Iron - Cast	10" DIP
12" DIP	CMI Water	Iron - Cast	12" DIP
14" DIP	CMI Water	Iron - Cast	14" DIP
16" DIP	CMI Water	Iron - Cast	16" DIP
18" DIP	CMI Water	Iron - Cast	18" DIP
20" DIP	CMI Water	Iron - Cast	20" DIP
24" DIP	CMI Water	Iron - Cast	24" DIP
30" DIP	CMI Water	Iron - Cast	30" DIP
36" DIP	CMI Water	Iron - Cast	36" DIP

3. Create and Edit a Parts List

Set the catalog to the desired material and then create a new parts list for that material. For example, PVC contains a fire hydrant, while others do not.

CMI - PVC					
Butterfly Valve_DI_FF_Long Body_Class 150A_AWWA C504					
Butterfly Valve_DI_FF_Long Body_Class 150B_AWWA C504					
Butterfly Valve_DI_FF_Long Body_Class 250B_AWWA C504

Hydrant_48in_Bury Depth_MJ	CMI Fire Hydrant	ByLayer		[none]	
Hydrant_54in_Bury Depth_MJ	CMI Fire Hydrant	ByLayer		[none]	
Hydrant_60in_Bury Depth_MJ	CMI Fire Hydrant	ByLayer		[none]	
Hydrant_66in_Bury Depth_MJ	CMI Fire Hydrant	ByLayer		[none]	
Hydrant_72in_Bury Depth_MJ	CMI Fire Hydrant	ByLayer		[none]	

Civil 3D allows you to add multiple catalogs to parts list (see figure below). This way the software allows companies to have one parts list for all needed parts as an option.

4. Three choices for creating a pressure pipe network: (a) Create from Object, (b) Create By Layout (c) Create By Path

CAD Masters recommends that you use by path or from object, this way the pressure pipe network will be linked to an alignment and profile pairing.

- a. “Home” ribbon tab > Pipe Network > Create Pressure Network from Object

- b. Create Profile View for the newly created pressure pipe network.

Many times, the pipe network will be shown on a different alignment. The edits will be done on the associated alignment and profile view associated to the pressure pipe network.

Example of Defining Pipe Runs

5. “Modify” ribbon tab > Pressure Pipe Network > Network Tools > Draw Parts in Profile

Either select the entire pipe network or select the parts you wish to show in the profile view. You can also click on a part, then right-click and choose add part to profile view. This is also available in the right-click menu after selecting a part. Alternatively, use the Pipe Network tab of the Profile View Properties to turn pipes on and off.

6. “Pressure Network” ribbon tab > Add Labels ... or "Home" tab > Add Labels

Different Methods of Editing a Pressure Network

1. Plan View (Select Pressure Pipe in Plan View)

- Add/Remove PI's will automatically add a bend and update the linked alignment and profile.
- At the end of the pipe run, you can use the grips.

- c. Under the Layout panel, you can also manually place fittings and appurtenances
- d. The Branch Fitting function will connect two different pipe runs, either with T's or Cross fittings.

2. Profile View (Select Pressure Pipe in Profile View)

- a. Use grips to edit the

b. Pipe Run Profile

This command allows you to edit the profile and override station ranges of the linked profile.

Pipe Run Profile Settings

General Overrides

Assign offset preferences along a station range of a pressure pipe profile.

No.	Start Station	End Station	Reference Profile	Distance	Style
1	0+00.00'	4+00.00'	Finished Surface Surface (1)	3.00'	Offset at Bends
2	4+00.00'	6+29.89'	Finished Surface Surface (1)	5.00'	Cut Length

3. Pipe and Fitting Properties

Pressure Pipe Properties	Value

4. Using the Edit Pipe Network Vista.

[illegible]

5. Other Tips and Tricks

- Use the Swap Part command to change one or more pressure parts. This command is in the ribbon if you select and pressure part first.
- To select an individual part, you must select it twice. The first time it selects the entire pipe run, the second time it selects the individual part.
- Use Design Check and Depth Check to analyze the pressure network for open connections and cover violations.
